Mission

Our mission is the transformation of health care delivery to achieve optimal patient care, professional satisfaction, and success of primary care practices.

Values

- ❖ Integrity
- ❖ Transparency
- ❖ Innovation
- ❖ Collaboration
- ❖ Accountability

Culture Compass

People We are dedicated to growing our team personally and professionally. TransforMED will be the most stimulating, rewarding and desirable place to work.

Agility We constantly strive to build-in organizational excellence. TransforMED will execute efficiently, foster decision making at the individual level and be organized for learning.

Service We are here to serve. TransforMED will hire and train happy, service oriented team members. Together they will hone the art of service excellence.

Growth We will grow by innovation in products and services. TransforMED will grow strategically and organically in response to the needs of our customers.

Our Why

We believe healthcare reform is about people's lives, their livelihoods and America's future. We will look back years from now and know that this transformation gave our children and grandchildren a better life.

How

Through continuous learning, we empower primary care to become more patient focused, leading the coordination of resources in the community to improve quality and lower costs.

What

Tailored practice transformation consulting services to help communities develop in the areas of patient access and engagement, organization development, care management and coordination and leveraging technology to create efficiencies.

What is Peer Support

Peers for Progress
Peer Support Around the World

TransforMED™

1. Assistance in Daily Management
2. Social and Emotional Support
3. Linkage to Clinical Care and Community Resources
4. Ongoing Support

Fisher et al. Health Affairs. 2012 31: 130-139.

©2014 TransforMED

Mi Salud Es Primero, My Health Comes First is Alivio Medical Center's peer support program in which peer supporters (*Compañeros en Salud*) are integrated with primary care to help patients improve self-management of their diabetes. In close coordination with the primary care clinical team, the *compañeros* provide support and assist individuals as they put into place the plans set forth with their care team for managing diabetes in their day-to-day lives.

Assistance in Daily Management

- “The nurse and doctor help me figure out what to do. The peer supporter helps me figure out how I can do it.”

Social and Emotional Support

- Maintain motivation over multiple decades with diabetes
- Support healthy coping with distress that so often accompanies chronic disease

Linkage to Clinical Care and Community Resources

Ongoing Support

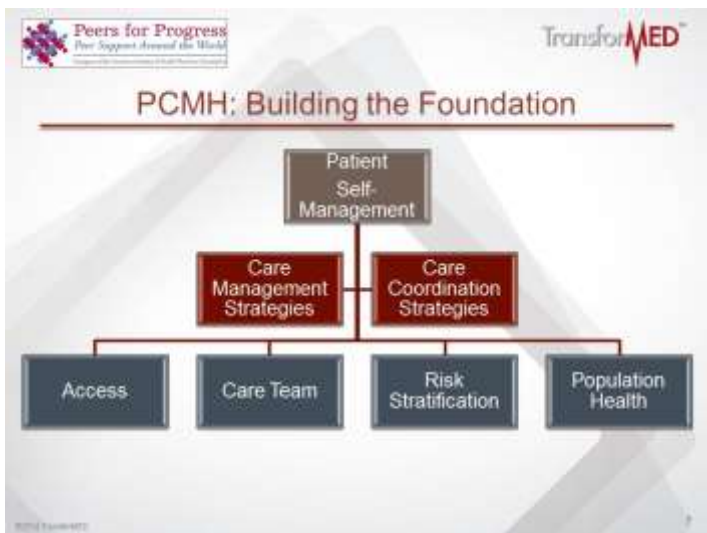

- Chronic Disease is “For the Rest of Your Life”

Evidence for Peer Support

- Improved quality of care
- Reduced unnecessary hospitalizations, emergency care
- Person centered, peer support *humanizes* care

The core of PCMH is the relationship between the patient and the primary care team, which is based on trust and collaboration. Within a PCMH practice, there’s a focus on patient engagement, a provider-patient relationship, culturally sensitive care and whole person care. PCMH is a model of care that transforms primary care practices from an office-centered practice to a proactive partner in health that practices preventive medicine and coordinates disparate care.

PCMH and Peer Support: Shared Themes

PCMH & Peer Support: Shared Themes

- ▶ Access to patient-centered care
- ▶ Team-based health care
- ▶ Evidence-based high quality care delivery
- ▶ Health coaching and enhanced communication to promote patient engagement
- ▶ Culturally-sensitive outreach and follow-up
- ▶ Building community partnerships
- ▶ Reducing health care disparities

PCMH Facilitates Peer Support

- ▶ Patient Engagement
- ▶ Emphasis on population health
- ▶ Team-based foundation for care

Patient Engagement

- Peer support can reach the “hardly reached” and help them access services

Emphasis on population health

- Working from registry or EMR helps extend services to all who need them

Team-based foundation for care

- Without concept of team-based care, peer support is seen as low-level care by a non-provider
- With extended care team, peer support is part of patient-centered care model

Care Team with Peer Support

In a team based visit roles and responsibilities are divided among care team members.

- Everyone is working at the top of their license, skills, and ability.
- Job descriptions define and communicate roles/responsibilities.
- Workflows and processes are patient centered, streamlined, and standardized
- There is accountability for everyone on the team and no surprises to the patient.
- Communication and relationship building occurs between team members and the patient and their families.

This visit reflects a proactive approach to healthcare where the patient's needs are anticipated and taken care of before or during the visit.

Risk Stratification and Population Management

Peers for Progress
Peer Support Around the World
A Division of the American Academy on Physician and Patient

Proactive Population Management

- ▶ Identify specific patient population
 - Age, gender, chronic disease
- ▶ Criteria for quality care (EBG)
- ▶ Define how those criteria will be met (Team)
- ▶ Tool to identify gaps (Registry)
- ▶ Process to address gaps
- ▶ Reporting
 - Accountability
 - Performance Improvement

Risk Stratification

©2014 TransformMED
5

Population Health Management sets the stage for Risk Stratification by identifying which patients fall into which bucket of population health: Preventive Screenings & Exams, Wellness & Lifestyle Management, or Chronic Condition Management. Risk Stratification takes this information and conducts additional analysis to sort the individual patients into levels of risk or acuity. This additional segmentation allows the care team to further personalize care to address not just the presence of a condition but the acuity and the patient's adherence to standards of care.

AAFP's Risk Stratified Care Management Rubric:

http://www.aafp.org/dam/AAFP/documents/practice_management/pcmh/initiatives/RSCM.pdf

3,700 Patients with Diabetes

High Need Group

- HbA1c > 8%, Psychosocial Distress, Physician's Referral
- 471 of the 3700
- Bi-weekly contacts for 12 weeks
- Monthly contact for 6 months until no longer meet criteria for High Need or until progress has stabilized
- Quarterly thereafter

Regular Care Group:

- Quarterly contacts, encourage clinical care and use of resources (e.g., group classes) and self-management
- Transition to High Need as needed

Care Management and Peer Support

Peers for Progress
Peer Support Around the World
A program of the National Academy of Health Peer Support

TransforMED™

Care Management

Care Management is managing the care of a patient to ensure compliance with standards of care, agreed to care plan objectives, and lifestyle choices that can impact chronic conditions.

©2014 TransforMED

Care Management provides proactive, comprehensive, whole person care over time by applying systems, science, and information to assist patients and their support system to become engaged in a collaborative process designed to manage medical/social/mental health conditions and results in high-quality, high-value care.

Peers for Progress
Peer Support Around the World
A program of the National Academy of Health Peer Support

TransforMED™

Peer Support Model

Low-Demand
Initial call to describe and offer services, not push to accept

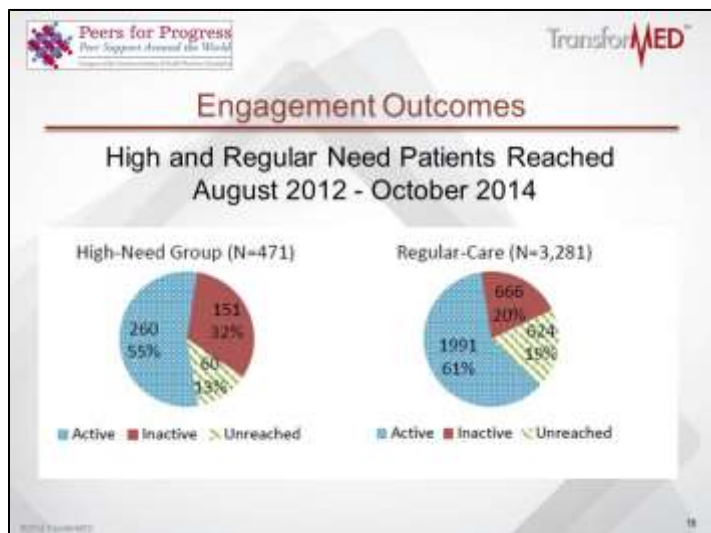

Persistent
Repeat calls in 2-4 weeks and/or according to judgment of Compañero

Nondirective
"Check in With" not "Check up On" Two-year availability to patient

Engagement
After patient is engaged, begin working on individually chosen goalAADE7

©2014 TransforMED

Self-Management Outcomes

Engagement Outcomes

- 87% of 471 High Need patients have been reached
- 87% of 3,721 Regular Care patients have been reached
- 15,138 successful 1:1 peer support contacts
- Average 582 successful contacts per month
- Range 326-885 successful contacts per month

Active – Engaged in communication with CES

Inactive – Has been reached but not actively engaged in communication with CES

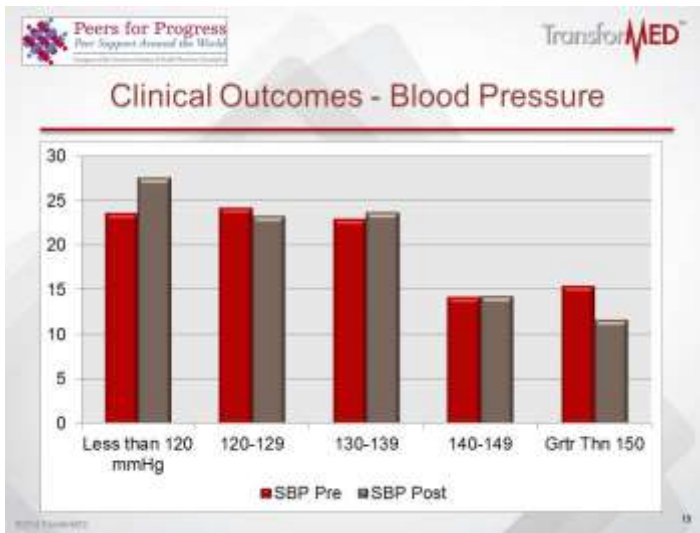

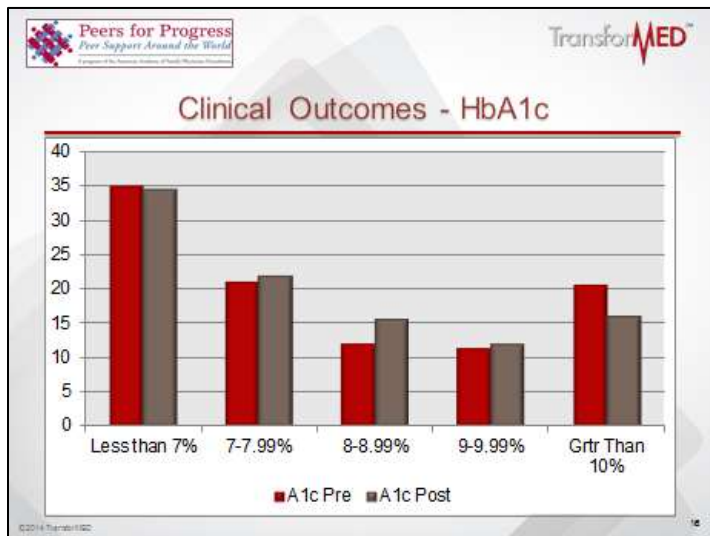

American Association of Diabetes Educators (AADE) – AADE 7 Self Care Behaviors

1. Healthy eating
2. Being active
3. Monitoring
4. Taking medication
5. Problem solving
6. Reducing risks
7. Healthy coping

Clinical Outcomes

PCMH and Peer Support

Peers for Progress
Peer Support Around the World
A program of the American Academy of Health-Medical Professionals

TransforMED™

PCMH Facilitates Peer Support

- ▶ Team-based foundation for care
- ▶ Patient Engagement
- ▶ Emphasis on population health

©2014 TransforMED

Team-based foundation for care

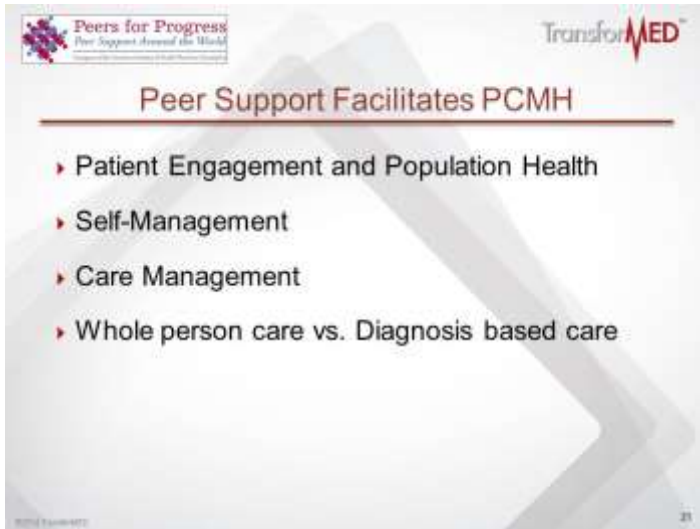

- Without concept of team-based care, peer support is seen as low-level care by a non-professional
- With extended care team, peer support is part of patient-centered care model

Patient Engagement

- Emphasis on patient engagement places value on key utility of peer support

Emphasis on population health

- Working from registry or EMR provides monitoring for peer support outreach

Patient Engagement and Population Health

- Can reach the “hardly reached” and help them become engaged in prevention and disease management
- Peer support can provide supportive, motivational services at lower cost than professionals

Self-Management

- Peer support as key source of self-management support

Care Management

- Peer support as extenders of Care Managers
- Ongoing support for those needing care management, e.g., patients with heart failure

Whole person care vs. Diagnosis based care

- Peer support gives voice to the patient’s perspective in the clinical care team

Lessons Learned

Peers for Progress
Peer Support Around the World
A program of the American Academy of Diabetes Educators

TransformMED™

Lessons Learned

- ▶ Scope of Peer Support Program
- ▶ Cross-training for Continuity
- ▶ Define Measures of Success Early
- ▶ Clinical Team Engagement Success
- ▶ Address the Needs of the Whole Person
- ▶ Expanded Care Team Enhances Clinical Outcomes

©2014 TransformMED
18

- Peer support can be organized, implemented and sustained to meet the needs of all those for whom a program is designed (e.g. all patients with diabetes), not just a few hundred enrollees.
- Behavior change necessary for long-term diabetes control in the “hardly reached” occurs when you address the needs of the whole person.
- Involving providers in planning, training and delivering peer support is an effective way to increase clinician and clinical staff buy-in.
- Creatively expanding the care team to include peer support increased practice success in patient-centered care delivery transformation.
- Consistent measurement is key to quality improvement efforts: mindfulness of current, future and ideal state during transformation allows for phased transitions between manual and automated data collection processes.
- Cross-training, process documentation, regular training and reinforcing concepts is crucial to sustainability and spread of best practices.
